Team Retrospective Report

Team: Bray IIoT Smart Solutions
Retrospective Report #: 2
Members: Aysen De La Cruz, Matthew Livesay, Alex Kearney, Abdiel Rivera, Josh Werner

Current Status

1. Give yourselves a pat on the back! List the team's accomplishments.

   One big accomplishment is our persistence. This project has been unfortunately plagued with roadblocks and miscommunication. Given that we are still doing our best to progress forwards despite the odds, is something to pat ourselves on the back for doing. Technically, we are still making progress even if it is at a slow pace, we have some hardware connections/soldering completed. We have taken the time to understand the previous team's web-application software, and have made plans for our changes and additions to this legacy codebase.

2. How is the team doing with communication? How will the team adjust going forward?

   The team is communicating fine, we are more present than earlier in the semester. I think as long as we continue being present and available we will be fine.

3. How is the team doing with time? (Is the project on track, behind schedule, ahead of schedule?) How will the team adjust going forward?

   We are behind schedule mostly due to unforeseen obstacles that have caused us to reevaluate the scope of our project. Moving forward we will have to spend some time catching up to ensure we can actually finish before the deadline. Most likely we will have to work on the project during our spring break to do so.

Keep doing	Start doing	Stop doing
Being available and open to discussion	Planning work more precisely to track progress	N/A
Reaching out to sponsor with any questions	Working more collaboratively e.g. (pair programming)	
Working towards progress despite roadblocks	Being more organized with our documentation
